FIRSTCLASS SCAN

Our Solution: FirstClass Scan

FIRSTCLASS SCAN

YOUR BENEFITS

Optimal comfort and reduced chair time for your patients.

Digitalize your practice: K Scan makes impressions fast and easy.

Open data system of K Scan allows saving the scans in different formats and use them flexibly.

High-quality digital impressions in lifelike colors to evaluate the treatment and to enable you to better engage with your patients.

Care about your patients as well as our environment! No more material waste due to taking physical impressions.

Our open-source system allows using the software for implants, crowns, orthodontics etc.

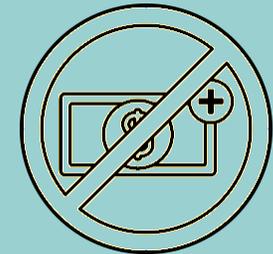

Excellent support

Free software and updates

2 years warranty

No hidden costs

Profitable Workflow FirstClass Scan

FIRSTCLASS SCAN

Technical Specification

Scanner Dimensions:

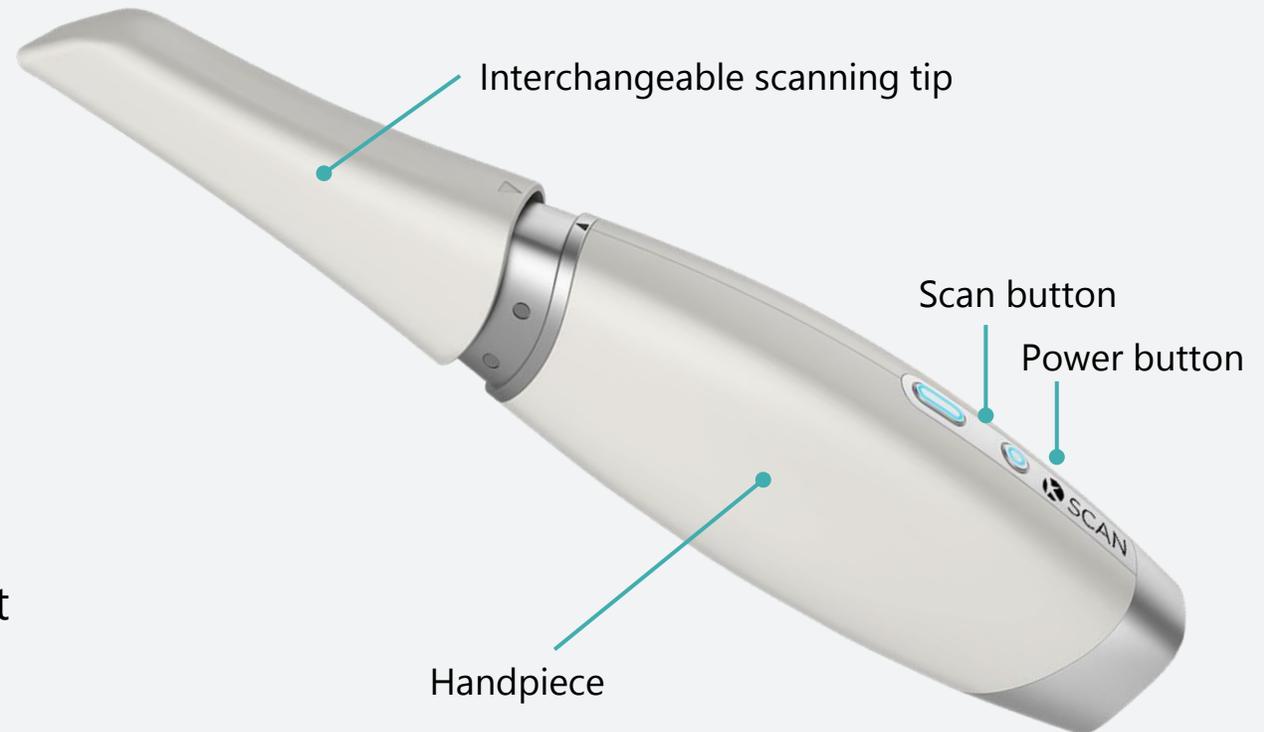

240 x 39.8 x 57 mm

Dimension Scanning Tips:

28 x 60 x 19 mm

Weight: 350 grams

- Autoclavable tips: 80 – 100 times each
- Inbuilt anti-fog module to prevent mirror from fogging
- No calibration needed

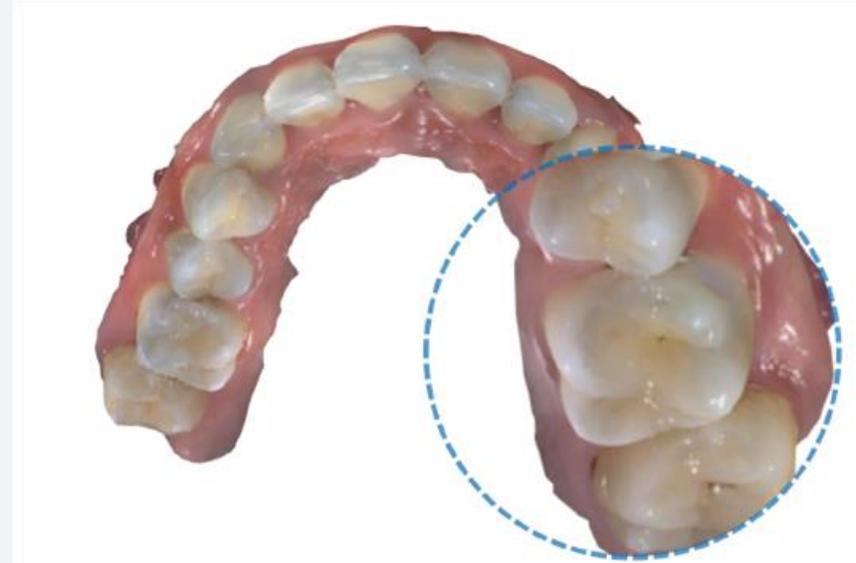

FIRSTCLASS SCAN

Benefits

Does not need calibration

Colour can reach up to 24 bit RGB

FIRSTCLASS SCAN

Software Features

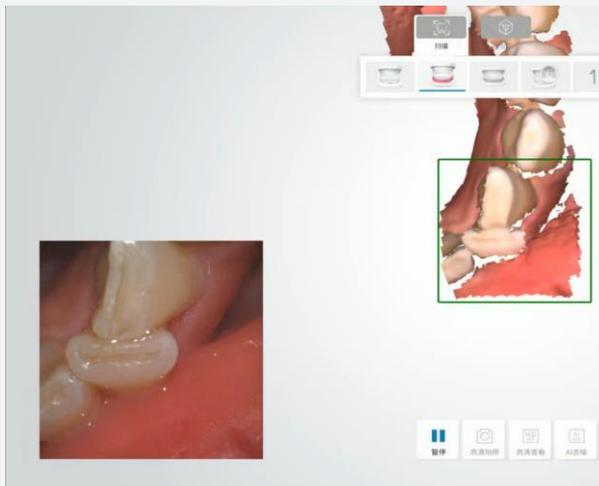

Occlusion Checking

Undercut Checking

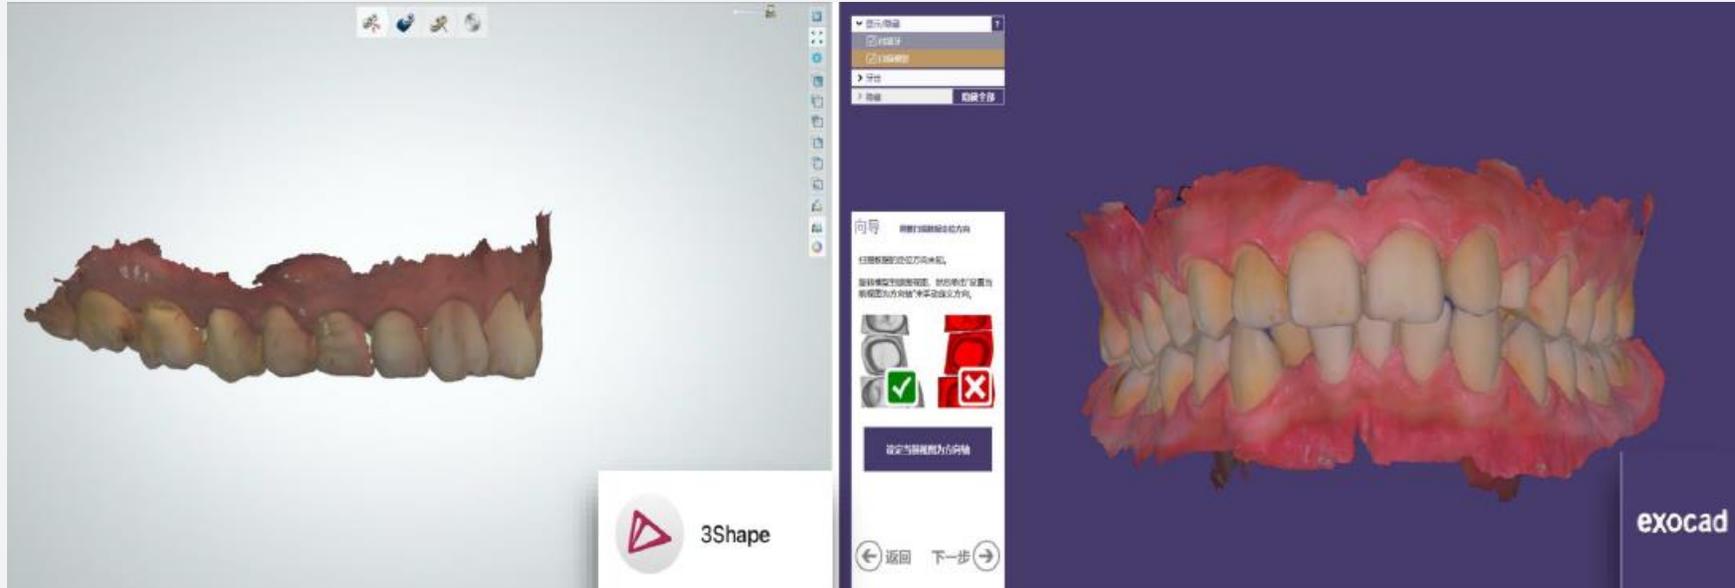

AI Scan

HD Photo

Fully Open Source – Export

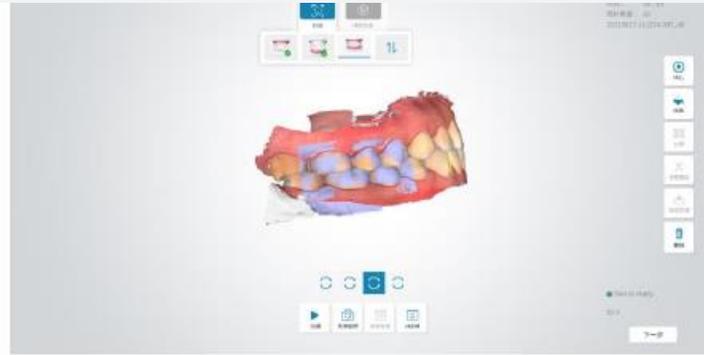

You can choose your preferred workflow, as they support OBJ, STL and PLY files all widely used

Scan Process

Scanning full arch
approx. 3 minutes

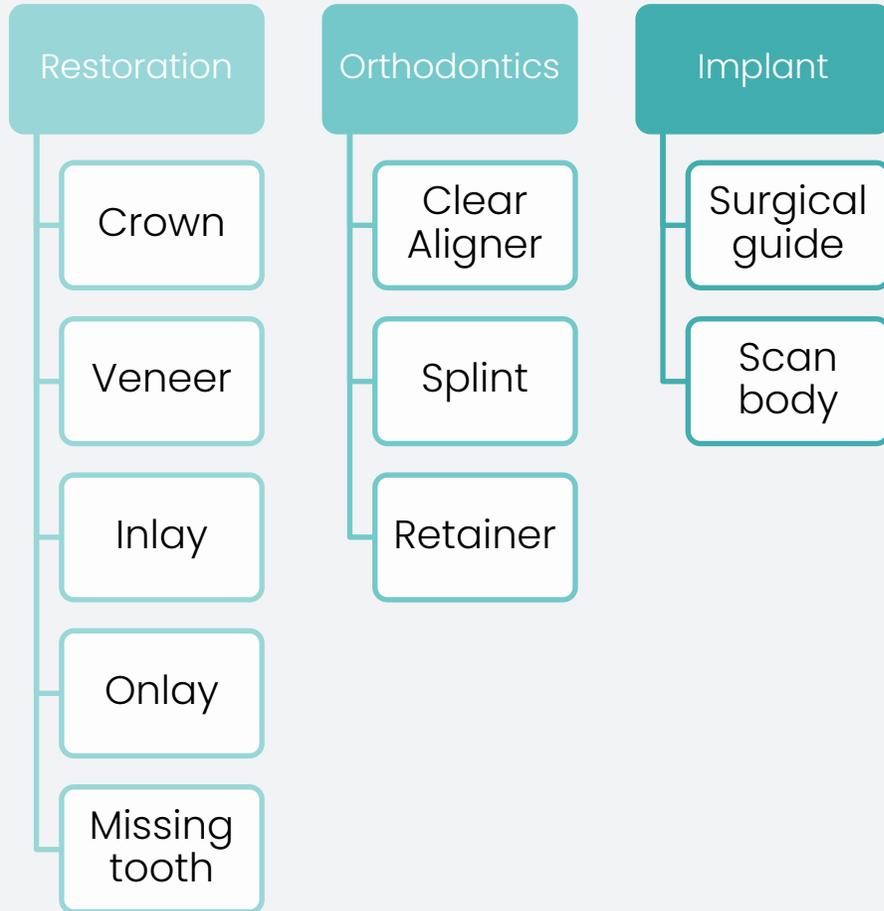

Bite matching approx. 5
seconds

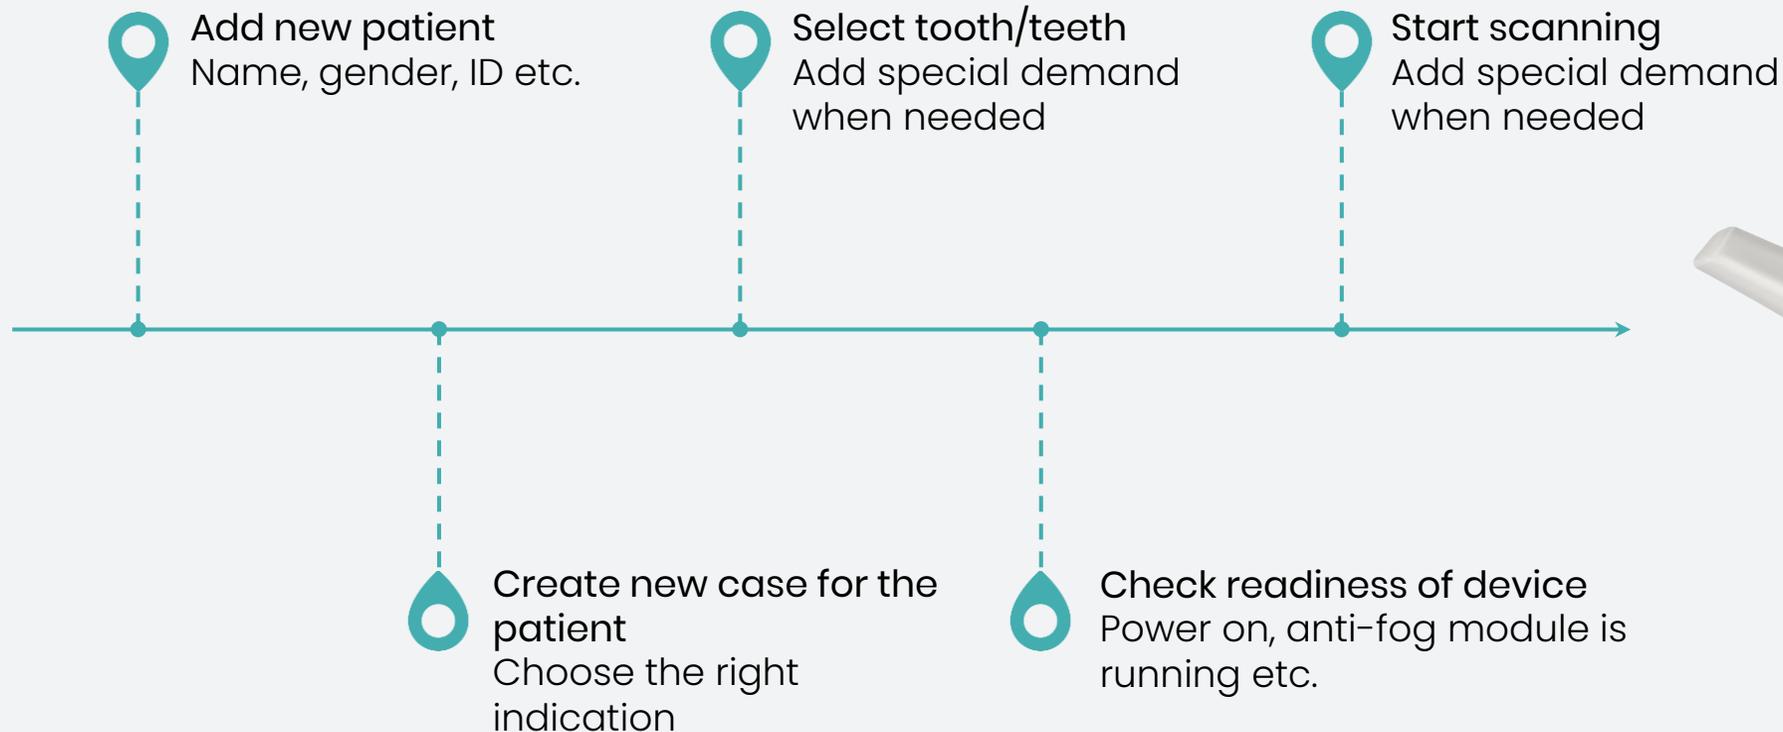

Model optimization
approx. 1 minute

FIRSTCLASS SCAN

Wide Range of Indications Are Scannable

FirstClass Scan Software are Simple and Easy to Use

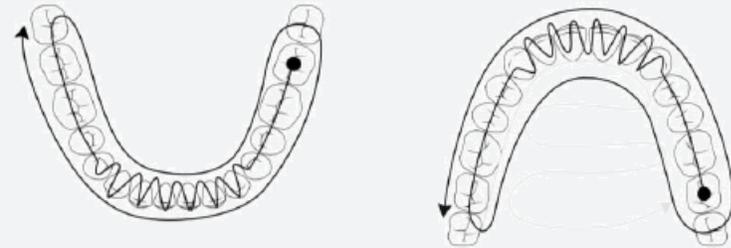

FIRSTCLASS SCAN

Scanning Technique

UNILATERAL or QUADRANT

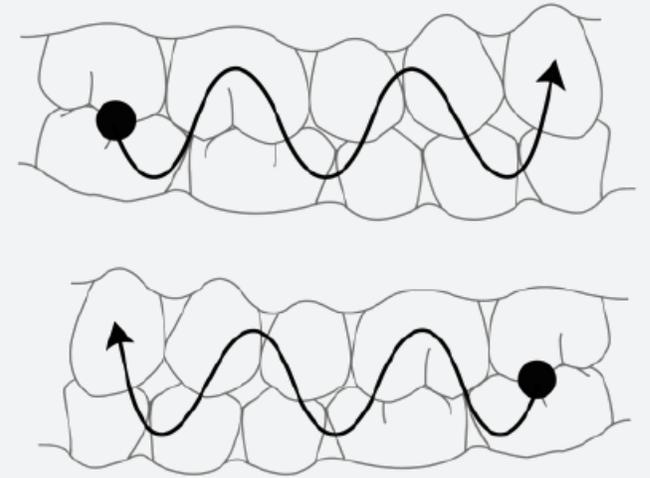

BILATERAL

- The teeth should always be cleaned from saliva and/or blood
- The optimum distance between the tip and tooth is 3-5mm
- Use gingival retraction thread or prepare supragingival margin lines

Occlusion Bite Matching

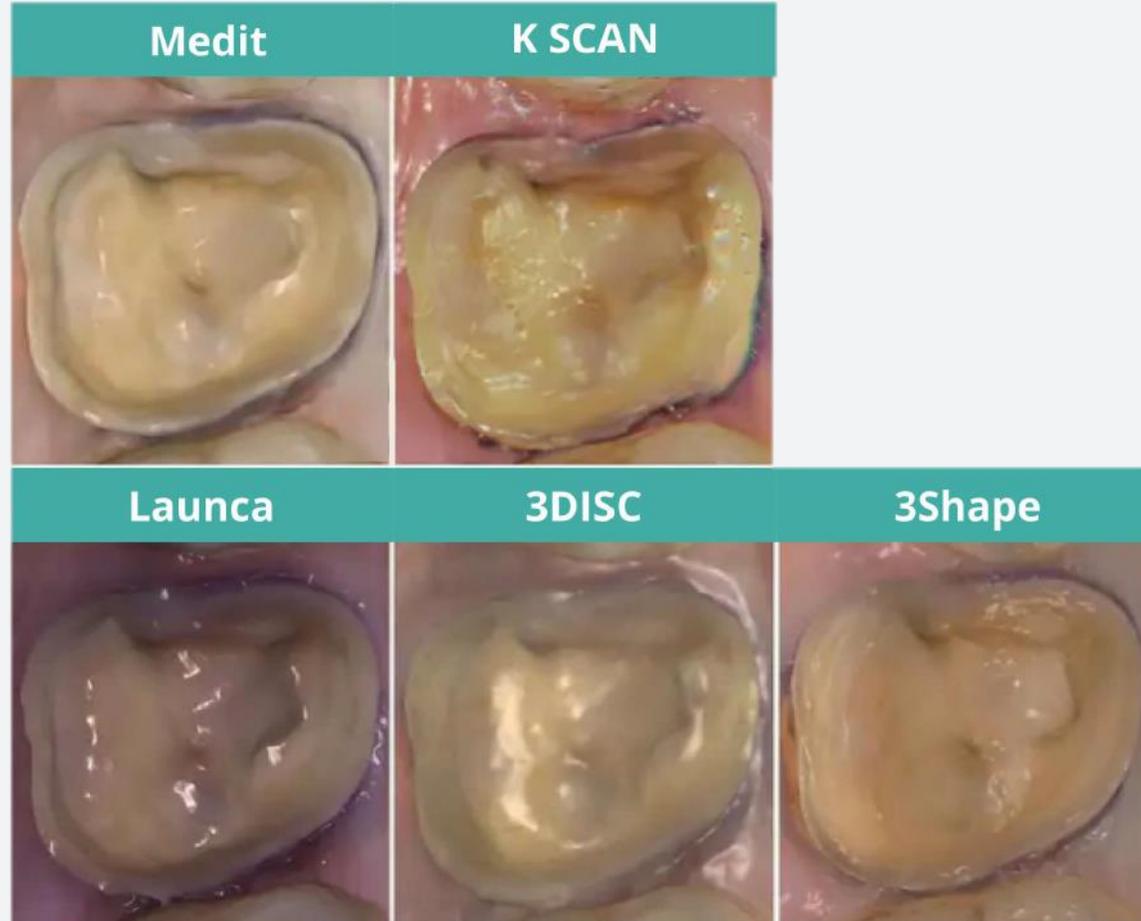

- The scan tip's scan mirror faces the buccal surface of teeth that need to be scanned
- Move the scan tip up and down with an "S type" movement
- At least 4 occlusal points need to be collected (2 per side) for accurate registration of the patient's bite.
